An Albertan Sums Up The Situation

THE OLD SOB STORY WON'T WORK THIS TIME.

Every day brings better reports for the Independent candidate. It is getting plainer and plainer that the people of Alberta are determined to bring about a change in government. Social Credit speakers are saying less and less about real issues; and more and more they are relying on name-calling and personalities. Through-out, at the Social Credit camp there is creeping the unmistakable evidence of panic that show well enough the feelings there. They see the handwriting on the wall.

Today's advertisement in a Medicine Hat paper urges the Social Credit to remember the old saying about "biting the hand that feeds you." You and I know that if the hand pretended to feed us but tricked us,—well, that's a different story.

Here's the way a former Social Creditor put it to me today: "I voted Social Credit in 1935 because I decided that Aberhart was going to work for me and my neighbor. He told us how sorry he felt for us, and there was a sob in his throat when he said it. Well, he's kept telling us how sorry he is for us, and that sob is still there. And he's still telling us, and the sob's still there. But I didn't vote for his sob; I voted for his ideas."

"His ideas,—well, you know what his ideas turned out to be. There's been a complete crop failure. And the sob alone won't get us anywhere."

"And now he's telling us how sorry he is for us, with the same old sob in his throat."

"He's asking us to remember the exciting old days of 1935, and to vote his way for old time's sake. You know, he reminds me of the guy who comes up to you with 'You know me, Al. Remember that party we had back in 1935? That was quite a time! I've never forgotten it. And, just before you go,—could you help me out a little—just till next Thursday— for oldtime's sake'."

"Well, he's touched me, and I've told him he still owes me something from 1935."

Young Man Born Here Passed Away in England

Mr. H. E. Sheasby received this week, the sad news of the death of his young nephew, Edward Oakland, son of Mrs. Oakland and the late Chas. Oakland, one time residents of Redcliff.

Edward was born here 19 years ago and when still a small vent with his mother and younger brother, David to England, where the family has resided ever since.

Edward was a bright lad, who won scholarships in his studies, and had just been accepted into the R.A.F. when he was stricken with tuberculosis over a year ago. He passed away on Feb. 21st, at the Sanatorium at Ilkley, Yorkshire, and was buried at Wakefield.

His brother, David, entered the British Air Force on the same day on which Edward was admitted to the Sanatorium.

The boys' father, the late Chas. Oakland, a veteran of the Great

Pro. Election Ballots MUST Be Marked 1 & 2

Voters Should Be Careful. Not To Spoil Their Ballots

The system of voting in use in the Provincial election will be that of proportional representation and the ballots WILL NOT be marked by a straight X but MUST BE marked with the numerals 1 and 2, as the voter's choice indicates. Any other mark made by the voter on the ballot other than numerals 1 and 2, will result in a spoiled ballot.

War, passed away at Belcher Hospital, Calgary in 1924.

Great sympathy is felt among Redcliff friends for Edward's mother and brother in their sad bereavement.

Sympathy is also extended to sorrowing relatives here—to Mr. H. E. Sheasby, his uncle, and to his grandparents, Mr. and Mrs. A. E. Oakland and families.

WHO RECEIVED "DIVIDENDS" AND HOW!

"IN TIMES LIKE THESE" we should ask ourselves some straight forward, practical questions. For instance—"WHAT WAS THE AVERAGE HOURLY WAGE PAID TO INDUSTRIAL WORKERS IN ALBERTA IN 1937?"

"Was it more than 25 cents per hour?" "What is the average rate per hour paid since then?" How much per month increase does it amount to?"

"What about employees receiving increases in wages of \$2, 245.72 per week, between April 1st 1939, and Jan. 31st, 1940, due to the Minimum Wage Act being enforced?" No wonder some are hearing, "KICK ABERHART OUT!" No, we do not mind a lot what you call these increases, "DIVIDENDS" or not, just so long as we know YOU ARE getting them.

Do We Want To Go Forward BACKWARDS?

The Independent Party say YU'LL do better for you by taking you back to 1935 and 25 cents an hour.

SHOW YOUR APPRECIATION OF THESE INCREASES YOU HAVE BEEN ENJOYING ALL THESE YEARS BY VOTING ON MARCH 21st. FOR YOUR BEST FRIEND, THE HARBEST WORKER, AND THE REAL CHAMPION OF THE WORKING MAN.

No. 1 For "ROBINSON"

The MAN who Knows and Works for You the Whole year through

CARD OF THANKS

The Canadian Legion, Redcliff, on behalf of the Canadian Legion War Service Inc., extends thanks for the generous response by the citizens and industries of Redcliff to the recent appeal for funds. The actual sum donated amounted to \$324.28 and full particulars of same can be seen by anyone so desiring, at the Legion Club or Ladies' Auxiliary Rooms. The Executive wishes especially to thank Mrs. J. Kitson and Mrs. A. S. Paterson and their assistant collectors, who in turn wish to thank His Worship, Mayor Sangster, Mr. J. M. Stratton and Mr. Nels Luna for their assistance.

CANADIAN LEGION NOTICE

A general meeting will be held on Saturday, March 16, 1940, at 7.30 p.m. A social evening will be held following the general meeting. A Fish and Chips and other refreshments will be served. Price 50 cents. Close at 11.45 p.m. All members are requested to attend.

SOLDIERS' VOTE

Anyone may place names of soldiers on leave, on voter's list, prior to March 19th. Act immediately.

The Ladies' Auxiliary to the Canadian Legion B.E.S.L. are holding a Big Dance and Card Party in Cliff Hall on Friday, April 5th. Cards from 8 to 10. Dancing from 10 p.m. to 2 a.m. There will be good music and good prizes. Admission will be 50 cents per person and the money raised will be devoted to providing comforts for our Redcliff Soldier Boys. A large crowd is anticipated for this worthy cause.

TENDERS WANTED

Tenders will be received by the Council of the Town of Redcliff up to, twelve, o'clock noon of March 18th for the assessment of industrial properties in the Town. The lowest or any tender not necessarily accepted. Particulars may be obtained at the Town Hall. Mail bids to be undergund.

Dr. Gershaw Pledges His Support To All Progressive Legislation

In a statement to the press today Dr. F. W. Gershaw reviews the work done by both Liberal and Conservative administrations at Ottawa and indicates his intention to support the progressive legislation of both parties.

DR. GERSHAW'S STATEMENT IS AS FOLLOWS:

"With determination to restore confidence and combat unemployment the following effective measures have been carried out by the government at Ottawa: trade treaties to develop markets for our natural products; home improvement plans, youth training projects in co-operation with the provinces, prairie farm rehabilitation activities, improvement of tourist highways and national parks, development of roads to mining areas, financial aids to municipalities for self liquidating public works, national housing legislation, development of air ports, help to needy fishermen, reforestation and special survey of mining areas."

"An example of what has been done, the Home Improvement Plan was started in 1936. Its main object was to create jobs in private industry for Canadian workmen. Under this scheme a home owner could borrow money at low interest rates to improve or enlarge his home."

"Up to the end of 1939 97,000 loans were made and more than \$39,000,000 was advanced. This provided 20 million man-power hours for work with wages. At the same time about another 20 million man hours were created for workers in the factories. This was for the benefit of the small home owner and 75% of the loans were of less than \$500."

"Another measure was called the National Housing Act. It has resulted in the building of 13,499 new homes and the borrowing of \$47,966,520 at low interest rates. A typical case of this category allowed the new home owner to make a down payment of \$250 and \$15 a month for 20 years."

"The Dominion Provincial Youth Training has provided training for 117,912 men and women from 16 to 30, and some 22% have been placed in jobs. Training is given in motor mechanics, radio, electric wiring, painting, plastering, carpentry, farming and for the girls, cooking, laundering, home crafts, domestic science, etc. All receive first aid training."

"If elected I will support such legislation as the above and press for more irrigation, more farm assistance, more good roads to encourage the tourist traffic and more and better social legislation, such as old age pensions, unemployment insurance and measures to improve health and living conditions."

JOHN SMITH SAYS!

This weather sure makes us appreciate the hard surfaced roads that "Doc" Robinson got us folks between Redcliff and Medicine Hat. When he and our Town Council get together, they sure make things happen. That explains Broadway's hard top today, and he now assures us that the stage is all set for REHABILITATION OF THE WATERWORKS PLANT, TOWN MAINS AND PAINTING OF THE WATER TOWER, this summer. This is what happens when you get real co-operation such as has existed between the Redcliff Town Council and

"DOC" ROBINSON

You boys will remember the wages in the Brick Plants before "Doc" was elected—two bits an hour. Now the Minimum Wage is 35 and one third cents an hour. This just means 75 cents a day more for you. And that one day's rest in seven—We can sure thank "Doc" for that, as well as TIME AND A HALF PAY FOR OVERTIME.

I don't see how anyone who has to work for a Pring can do anything else but

Modern Hospitalization

During the past few years a great deal of publicity has been given to the extraordinary advances which have been made in the field of medicine and surgery. Magazines and newspapers have devoted, and still are devoting, a great deal of space to new discoveries in the warfare against disease and death, to new methods and agents of immunization against communicable ailments, to new anaesthetics which are going far to-day to rob operations of their former terrors, and to new medicines and treatments that to-day are curing diseases which a few years ago spelled almost certain death.

Not so much, however, is being said or written of the remarkable progress which has been made in the field of hospitalization and hospital practice in the past few years, although the hospitals of the country are keeping apace with the advance made in medicine, surgery and anaesthesia. It is not a far cry back to the days when the average individual shunned the hospital as a place to be avoided at all costs, when people begged the doctors not to send them to a hospital for treatment, when the kitchen table was preferred, at least for minor operations, to the facilities afforded by the operating rooms in the hospitals; when the risks of infection incurred by such treatments in the home were regarded with less fear than the unknown experiences, and often wrongly anticipated expense, which were expected in the hospitals.

To whatever extent such fears and alarms at the prospects of a sojourn in the hospital may or may not have been warranted, there is certainly no need for them to-day. There is no justification for dread at the necessity for making a stay in the modern hospital, such as is to be found ministering to the sick and injured, not only in the larger centres of population, but even in many of the smaller towns.

The Patient First

The care and attention that is given the patient in the up-to-date hospital is beyond reproach. The service is invariably excellent. The right precautions taken to prevent infection in the operating room and the wards could scarcely be improved upon, and cross-infection to-day is almost unknown in the isolation hospitals. Every precaution is taken to ensure quietude for the patient for whom quiet is essential for speedy recovery, and patients are treated with sympathy by the entire staff, including superiors, nurses, probationers, internists, orderlies and maids.

There are, of course, at all times, in the hospitals, patients who are fractious and cantankerous. This, however, is to be expected, when it is remembered that a sick person is not a normal person, but even these cases are sympathetically treated and their whims and petulance are catered to as far as is reasonably possible and to the extent that it may not be injurious for them.

"The patient is the first consideration, and must at all times be given the utmost consideration." That appears to be the slogan in the well run hospital of to-day, and it might be added in parenthesis, most of the hospitals in Western Canada are being operated on a highly efficient basis.

One of the many phases of hospital administration which has shown marked improvement in recent years is the dietary. When patients have reached that stage in their recovery from illness or an operation that they may be safely put on full diet, they find their meals trays well laden with well-cooked foods in great variety, served in tempting forms and in ample quantity. The preparation of these meals is under the guidance of an expert dietitian who balances the calories and measures out the vitamins essential to good nourishment and the needs of the patient.

Chance Improved

Much of this improvement in hospital technique as well as in equipment and standard in Western Canada is due to the action of the administrative boards in subjecting their institutions to annual inspection and rating of the American College of Surgeons. When a few of the larger hospitals adopted this policy some years ago it was not long before the others followed suit and the large percentage of Western Canadian hospitals that year in and year out are awarded the highest possible rating, speaks volumes for the earnestness with which the governing bodies and the medical and lay staffs accept recommendations and adopt improvements as rapidly as circumstances and finances permit.

And no day is past when the hospital need be shunned by those who are sick and the injured. Rather, it is an institution to be courted by those who have need of its services. Indeed, the chances of a speedy recovery from illness or accident are much greater to-day in the Western Canadian hospital than a few years ago and very much greater than in the home.

A Very Old Skeleton

Elephant's Bone Indicate It Weighed Over Eight Tons

The skeleton of a prehistoric elephant nearly 16 feet long and 13 feet tall, has been put on exhibition in the Paleontological Museum in Odessa, Russia. It is estimated that the monster lived 300,000 years ago and weighed at least eight tons. The skeleton was found recently standing upright in the sands of the Khajirav estuary on the Black Sea coast.

Had Same Honor Twice

Ottawa Man Helped Drive Gun Carriage At Notable Moments

Thirty-nine years ago as a young naval rating, Lieut.-Commander B. Haines, now at naval headquarters in Ottawa, helped man the gun carriage carrying the body of Queen Victoria in the funeral procession after the horses broke away from the carriage.

He was second in command of the 80 ratings of the Royal Canadian Naval Volunteer Reserve who pulled the naval gun carriage taking Lord Tweedmouth's body from St. Andrew's Presbyterian church to the Union Station as the last act in the state funeral. The unit was under Commander J. W. B. Roy of the Royal Canadian Navy.

Lieut.-Commander Haines was one of the 100 naval ratings in the Queen Victoria funeral procession who were ordered, on King Edward VII's approval, to pull the gun carriage from Windsor Station to St. George's chapel and then to Windsor Castle after the accident. Fragments by the drums as the gun carriage was being pulled away from Windsor Station, the horses leaped forward, breaking the traces and leading to considerable confusion. The naval ratings went into action a few minutes later, however, and manned the gun carriage successfully.

Diet On Submarine

Have Delicacies Not Supplied To Men On Surface Ships

A dish of tinned prawns for supper on the bottom of the Hallogland light is one of the oddities of naval warfare. Virtualizing for the crews of the submarine services includes a large number of delicacies which are not in the messing of surface ships.

The reason is health. The men get no normal exercise for the 27 or more days they are on patrol. Many of them do not see the sky or the sun. Consequently they lose their appetites, and the provision of delicacies is intended to tempt them to eat. Moreover, their diet for the whole time they are away is carefully drawn up to give balanced nourishment.

The victualing department at the Admiralty has another wartime problem—the provision of stores for ships working far from the normal bases of supply. There has also been the question of dispersal of stocks to prevent the submarines from being the easy targets in the event of severe air attack. A number of supply ships have been taken over, loaded with refrigerating plant, to serve vessels in out-of-the-way places—Manchester Guardian.

SELECTED RECIPES

DIVINITY FUDGE

1/2 cup dark brown sugar
1/2 cup cold water
2 eggs white
2 eggs white
1 teaspoon vanilla
Cook sugar, water and sugar to form a firm ball in cold water. Beat egg whites with salt until stiff, and gradually add hot sugar. Add vanilla and beat until thick. Variation: Instead of milk, dry phosphate, chopped candied ginger, etc. Run on buttered pan.

FRUIT SYMPHONY

1 package Lemons or Lime Jell-O
1 cup hot water
1 cup fruit juices and water
Dash of salt
2 cups diced grapefruit (sections free from membranes)
1/2 cup canned crushed pineapple.
Dissolve Jell-O in hot water. Add fruit and cold water and mix. When slightly thickened, fold in fruit. Turn into individual molds. Chill until firm. Unmold. Serve plain or garnish with whipped cream and orange sections. Serve 8.

Popularity Is Increasing

Newspaper Holds First Place As Dependable Source Of Information. Statistics show that in Canada and the United States there are 41,600,000 newspapers sold every day. In the past five years there has been an increase in the daily circulation of newspapers of over 2,000,000. In the past 15 years, circulation has increased 26 per cent. The population in that period has increased only 17 per cent.

Newspapers continue to grow, despite the increase in other facilities for transmitting information, because experience has proved that the daily newspaper is the most dependable and complete source of news.

Thermometers need be marked no lower than 50 degrees F. in Honduras.

If some persons were to pay as they go, they'd be in reverse.

Fans Set Example

No People Ever Came Through Battle Ordered With Their Base

The Finnish people, as well as the British armies, have given a performance that entitles them to respect promptly, and not merely as the convenience of others, such help as the outside world is prepared to give them, whether that help takes the form of loans for "non-military", munitions themselves, volunteer or contributions for relief. No people ever came through a bitter ordeal with a fiercer resolve. From the start they faced the fact that the longer their armies fought and the more damage they did to the prestige of the invader, the more terrible would be their punishment in defeat. They have not let that prospect rob them of their courage. They have not lost their fire or their self-restraint.

To the bravery of their own troops they have responded with quick sacrifice. To the cheap taunts and the vicious slander of the Kremlin they have replied with dignity. To the outside world they have given an example of democracy as every despot must hope to find in the hour of its trial: resourceful, self-reliant, generous, determined. The example humbles those who are forced to wonder whether their own faith could meet this cruel test. —New York Times.

Vital As Heligoland

Island Of Rylt Is Germany's Important Naval Base

The London correspondent of the Ottawa Journal, says: Everybody knew all about Heligoland, Germany's famous base in the last war. Nobody outside service circles knew anything about Rylt when this war started; yet Rylt, Germany's biggest island outside the Baltic, is just as vital from a naval and air standpoint now as Heligoland was formerly.

Forty miles north of Heligoland, Rylt is about 40 miles in extent, and is fitted up as a comprehensive air and naval base. Germany's military and naval forces are launched from this island, which possesses A. A. defence, underground hangars, and is connected with the mainland by the Hindenburg Dam, constructed at the cost of many millions at a time when we were asked to sympathize with an impoverished Germany, quite unable to meet her financial obligations.

The importance of Rylt is recognized by our naval and air people, its civilian population, numbering 10,000, had been evacuated on September 2. If the Hindenburg Dam were badly broken, it would inconvenience German supplies to the island.

The state game department of the state of Idaho has airplanes to drop salt over the countryside in the winter, to keep deer and elk healthy.

The ready-witted answer usually resembles a night telegram — it doesn't arrive until tomorrow morning.

Eighty of the 91 known elements in the world were discovered within the last 200 years.

Build WALLS AND CEILINGS ON A Safety Basis

with **GYPROC** FIREPROOF WALLBOARD

In choosing a wallboard, whether for walls and ceilings of a new building, or for renovations, alterations and repairs, it will pay you to consider these outstanding reasons why Gyproc is superior to ordinary wallboards:

- FIREPROOF—therefore safe
- PERMANENT AND DURABLE—therefore economical
- WILL NOT CRACK, WARP, SHRINK or SWELL
- INVISIBLE JOINTS—panel strips are unnecessary
- SMOOTH, DUST-FREE SURFACES—easy to keep clean
- TAKES ANY TYPE OF DECORATION—no monotony
- THE LIGHTEST WEIGHT gypsum wallboard made in Canada

Gyproc is sold everywhere in Canada. See your local Dealer in Lumber and Builders' Supplies.

Many Women Employed

Members Have Increased Greatly in England Since Last War

Before the Great War, there were only 20 women to every 100 men employed in England. In 1918, female workers had picked up as many jobs left by soldiers that the ratio had risen to 26 women per 100 men. Last year, England had 42 women for every 100 men workers.

It is estimated that when the war ends late fall swing and men now in factories are called to the colors, there will be 85 women for every 100 men working in England. Of the 22,638,000 jobs, 10,448,000 will be filled by female workers.

Robert Kerling, test pilot, took the manufacturing company's YP-31 on a runway, gunned the 430-horsepower engine and the craft charged almost straight up in the air and, at a respectable height, hovered virtually motionless.

Hardly more than 50 feet was required for the takeoff of the high-winged, slender-fuselage monoplane. With said the new craft was virtually a "flying motorcycle" designed for use behind the lines in infantry liaison as a counter-delivering messages or co-ordinating troop movements.

The ship came down at an angle almost as precipitous as its takeoff. It almost stood still as the wheels touched ground.

Winston Churchill is one statesman who can roll a thrust, a warning and an appeal all into the same sentence.

In Use For Century

In drilling a salt well near Centerville, Pa., in 1844, John Cresswell struck natural gas at a depth of 700 feet. This marked the beginning of the use of natural gas for industrial purposes in the United States.

Aeroplane Flights Bring Back Reports About What Goes On In Enemy Camps

Frontiers may be closed and the Stiefel line at present standing firm, but there is little mystery about what goes on in the enemy camp.

The R. A. F. reconnaissance flights bring back photographs as well as verbal reports, and the photographs show a astonishing amount of detail.

Airdromes, substitute landing grounds, ports and naval bases, railways, canals and navigable rivers, military and commercial main roads, all have a story to tell. All movements by road, rail or water are soon known to the Allies.

In these reconnaissance our aircraft generally aim to avoid contact with the enemy, for the very good reason that speedy knowledge of what is happening in the enemy harbor or in the vicinity of fortifications is more useful than the possible destruction of a German fighter.

The value of photographs is obvious. The camera sees more and retains more than the eye. "Close-ups" are often so clear that they show useful details. Photographs of a naval base may tell not only the number but also the class of the ships in harbor, whether they have steam up or appear to be fueling, and whether there is activity in the building yards.

Much useful work is done by comparison with earlier photographs of the same scene. The photographer is noted, and the trained intelligence officer, who may spend hours poring over a single print, sees much that the ordinary observer would pass over.

Shadow, for instance, form a useful clue during intermissions. Guns which will not do; these intermissions must be tracked with reason before they are accepted.

Before the pictures are "read" they must first be obtained. Each aircraft carries two cameras, one weighing about 50 pounds, the other a German counterpart. Both are compact and virtually foolproof; they are designed to work in the worst circumstances and require very little attention. One is completely automatic, and contains an interchangeable magazine, big enough to give 125 exposures. The magazine can be changed in the air in a few seconds.

At dawn at the start of a flight a war crosses the airframe to the waiting bomber. Camera and drums of ammunition are transferred to the aircraft, and the vertical camera is screwed into place; the oblique camera is held in the hands and is placed ready in the fuselage. The vertical camera is set before the flight begins, according to

the probable visibility and flying altitude. Service is so efficient that the setting rarely proves unsuitable, and should there be an error it is so small that it is easily corrected while the films are being processed.

Meanwhile, the first pilot has started the engine, and the crew have come aboard. Each knows the other work and has been trained to co-operate. The aircraft takes off for Germany. "The purpose of this particular flight is, let us say, to obtain information of certain enemy airdromes, and on approaching the first objective the pilot takes the aircraft down through the cloudless, seen on the left the circle of hangars, and swings the machine round towards it.

A straight and level course is necessary for good aerial photography—though it makes ground from ground defenses more dangerous to the observer, the camera is started, and after photographing 50 or 30 seconds the camera is swung to its next objective. No notice has been taken of the soldier on the left.

Suddenly the pilot turns the aircraft off its pre-arranged course and signals to the observer to start the vertical camera. The observer has seen a large building, and he is aware of its importance or substitute landing ground. At their furthest point the observer photographs the building, and the aircraft is swung to its next objective. There is some activity ahead, but the aircraft flies on unperturbed. The speed, height and course, while the crew look down on the Messerschmitts, as apparently obvious of the raiders, they prepare to

It is not the R.A.F. machine reaches the third aircraft. The observer is now in a position to see the necessary photographs have been taken, however, before the aircraft is swung down on the raiders from behind. Our gunners hold their fire until the enemy are close, and in the meantime the British aircraft keeps on its course. The camera has finished its task. Only then does our aircraft slip up into the clouds.

At home, the magazine are removed for developing and printing; the observer makes his report, and the three hours the prints are being inspected by experts. Stereo-photos and magnifiers tell the observer that the prints are being inspected by experts. Stereo-photos and magnifiers tell the observer that the prints are being inspected by experts.

Such was a typical instance of R.A.F. activity in this connection. Sometimes it is less straightforward, and photographs may have to be taken from as low as 500 feet or as high as 5,000.

Sugar Is To Blame

Chicago Dental Combined It Is Cause Of Tooth Decay

It's the sugar that you eat that causes teeth to decay, Dr. Leonard Fiedick of the Northwestern University Dental Institute is convinced.

Sugar taken into the mouth produces acid which, with bacteria normally present, causes tooth decay, he reported to the midwinter meeting of the Chicago Dental Society.

"The only method known at present to control dental decay, which has good scientific evidence to support it, is to avoid the intake of sugar into the mouth," he said. Some conclusions Dr. Fiedick drew from the research and which tend to disprove many popular beliefs about tooth decay were:

1. There is no relation between soft and hard teeth and tooth decay.
2. Eating hard foods doesn't prevent decay.
3. Dietary changes have no direct influence on the enamel, where decay always begins.
4. Tooth decay is not a continuous process but an intermittent one.
5. Calcium and phosphorus are needed for tooth formation but don't decrease decay.

One Secret Of Success

The success of a business position depends not only upon the ability to do one's work well, but also upon one's facility for getting along with one's associates. Being courteous and considerate of one's fellow-workers, superiors, the firm's customers is as important a success factor as the technique of the job.

At the moment there are 15,000,000 men under arms in Europe.

"I'm for ever blowing Goebbels"

—The News of the World.

Have Had No Training

Present Generation Ignorant Of Art Their Grandmothers Practiced

Some women have decided to wear longer dresses, elegant men—what man is not entitled to that adjective when a woman is about it—have noted with regret that in the period of abbreviated garments the female art of picking up the skirts has undergone a serious decline. Nowadays long skirts are worn of evening by many women, but few of them possess the knack of raising them gracefully from the sidewalk as they pass from motor car to door, and a few indeed they are in the exigencies of transport can cross a street with surety, confidence and a faint of grace. The parade of the skirts is a graceful art, and it is a pity that the present generation has had no training in an art in which its grandmothers excelled.

Those grandmothers of another period—and they were as ornamental as their charming children and charming children's children—had a job to do when they obligated to protect the garments from dust and moisture, but they were bound to do it without displaying the shoe top; their intent alone were for the vulgar view. How apt they were at that! The parade of the skirts has never moved from exactly the proper position; the other hand, with assurance born of knowledge, unobtrusively drew back and clasped the garments to be raised; the hem of skirts and petticoats rose to precisely the decorous altitude—and a lady crossed the street, serene sure that with her all was perfect.

No doubt the modern's children of those gifted women will some day prove the elegance of that polished gesture of gentility, but they must have practice to do it.—New York Sun.

There's the story of a housewife who shipped a package of homecooked food for her daughter in the city. In the wrapper she wrote: "If not delivered in 10 days, never mind."

In Japan, chrysanthemum soup, made with chopped petals of the flowers, is a popular dish.

Peel apples can be kept by immersing in salt water until used.

Please Him With Hand Knit Sweater

Use Cashmere or any yarn with matching socks. They quickly don in every ribbing. Pattern 6614

No man can have too many sweaters. Knit this comfortable cashmere or Cashmere sweater with matching socks. They quickly don in every ribbing. Pattern 6614 contains instructions for making sweater in sizes 36-38 and 40-42; socks in any size desired; illustrations of them and fitting.

To obtain this pattern send 20 cents in coins (stamp cannot be accepted) to: McCall's Art Department, 1715 Broadway, New York, N.Y.

There is no Alice Brooks pattern book published.

Army Heroine

German-Jewish Girl Doing Surgical Work In China

A young German-Jewish girl who fled to China from Berlin in 1933, under the fear of possible war in Europe or further anti-Jewish outbreaks to-day is the heroine of the Chinese army.

Prussian Annette Frankel sought safety and happiness in China. The "happiest—fun," she calls it—with the never-ending stream of wounded soldiers which preceded China's retreat to the western hinterland.

With the rank of captain in the Chinese medical service, she is known throughout China as "Wong the doctor," she became a Chinese citizen when she married a young student in North China.

When the Chinese war started in 1937, she joined the staff of an American hospital in Kailang and her job was to dress the wounds of soldiers. She closely watched the work of the American surgeon and his wife, and when the shortage of surgeons became acute, she performed minor operations. Within a year she had become the best "wound surgeon" in the medical corps.

At Wuchang, she was assigned to an American hospital in Kailang and her job was to dress the wounds of soldiers. She closely watched the work of the American surgeon and his wife, and when the shortage of surgeons became acute, she performed minor operations.

She collected clothes and transferred some of them to the outskirts of the city where she found them a place to live. She bought beds with her own money and as a result of her work was recognized by the authorities.

Later, she supervised the treatment for compound accidents and had 34 nurses working under her.

Despite more than two years of constant bombing, shelling and machine-gunning, "Wong the doctor" has no fear of war.

As for the European war, "Hitler knew" was war coming and could have stopped it. I feel sorry for my countrymen but I have work to do here," she declared.

He slipped around at a girl's house, and as he ran up the steps he was confronted by her little brother.

Billy—Hi, Billy.

Billy—Hi!

Billy—Is your sister expecting me?

Billy—Yes.

Billy—How do you know?

Billy—She's gone out.

The palm, or coconut, crab lives almost completely on coconuts. It is a native of the East Indies.

Importance Of Knowing Germination Percentage Of Wheat Seed Is Stressed

Caught In Beaver Trap.

Out That Fought Bushmen In Quebec Camp Is Dead

The dead body of Roger Lake is no more. Not a fearsome looking bird in the coldness of death, its days of nesting lumberjacks at a lonely camp 15 miles from Hudson, Quebec, are over and the body is to be stuffed as a memento of the trip which took two police constables by truck and dog team on a chase which attracted continent-wide attention.

Ornithologists to the contrary notwithstanding, the bird is a screech owl. Its measurements are: Weight four pounds, height 22 inches; wing spread four feet eight inches.

It met its Waterloo at the hands of International Paper Company's own Constable J. A. Charlebois and it was a beaver trap that filled the role of butcher.

The constable, after many a vain attempt to shoot the marauder, cut down a tree not far from Roger Lake, about a mile from the end of it and wired a perch in the tree. He then wired on a number four beaver trap containing two sets of strong steel jaws. The tree was hoisted back onto its stump and wired in place to prevent escape.

The next morning the trap sprang when man arrived at the spot the day was lying on its back. In last desperate effort to escape the screech owl raised the tip of the tree a couple of feet in the air, then came crashing into the snow below. There is nothing unusual about the bird except perhaps its mentality, and when the shortage of man's help from his hands and scratching them dangerously close to the body, he was shot. Many a time it hunted men with its sharp beak as it plunged down out of the bush. Always the attack was made on low woodland, usually in the dusk of sunrise or sunset.

Things have returned to normal at the Boudreau camp. Lumberjacks no longer hesitate to go to work because of the screech owl's return after sunset. Their hats are safe forever.

Date For Easter

Will Not Come As Early Again As Last Year

Easter is stealing a march on Father Time and making a warty world step even a little more lively with its 1940 appearance March 24, earlier than in 1913 and earlier in any year than it will ever come again until after 2000.

In Canada's season of fashion-consciousness can depend on being able to flaunt brave colors and filly dresses too much, and Easter, 1940 may see Canadian birds well wrapped in winter furs.

She may find some consolation in the fact that the 1940 Easter reaches an all-time "late" for the century, coming on April 26, more than a year later than 1840's first date, and the latest possible day on which Easter Sunday can come. Three times in the century—in 1905, 1916, and 1960—the feast coincides with the doubly English holiday of April 23, which is St. George's day and Shakespeare's birthday.

Promenading on Easter Sunday on boardwalks and main streets is a comparatively recent North American development of the ancient feast day, but the history of the day itself has roots in the first days of Christianity, and owes its name to more ancient mythology.—Brandon Sun.

Valuable Medical Test

Chemical Dye Show Doctors When Patient Can Eat and Drink

A simple test, in which a common chemical dye is used to determine how soon after an operation a patient is ready to eat solid food was described to the International College of Surgeons at Venice, Fla.

Dr. Benjamin Golden reported that he has found methylene blue will not be absorbed by the stomach and pass into the circulatory system and the stomach is capable of receiving a solid diet.

The dye is given in concentrated powder form either orally or through a tube which often is placed in the stomach during the operation.

The use of sound, disease-free seed is an important step in attempting to grow a uniform high yielding crop.

In the case of wheat, frost injury, heat damage, mechanical injuries, fungus diseases and so forth. Heavy infestations of rust or covered seed can also be detected readily. Investigations conducted at the Dominion Laboratory of Plant Pathology have shown that plants from seed damaged in any way are more likely to be attacked by the rust fungus than those from sound seed.

Occasionally wheat seed samples show many discoloured kernels. This is usually a definite indication of a rust infection. The rust fungus is commonly caused by a rust fungus which may attack and kill the young plants before they are able to grow or invade the crown and retard growth throughout the season. Consequently, samples showing a large number of discoloured kernels should be looked upon with suspicion.

Seed showing only a trace, or a slight amount, may be used, but it would be advisable to treat such lots with a dust as mentioned above.

When selecting seed, the importance or nature of the disease in seed samples, they should be sent to a plant pathologist for examination. Information as to what the problems may be obtained from the nearest Dominion Plant Pathology Laboratory. These are located at Edmonton, Saskatoon and Winnipeg.

A Strange Muddle

Germany And Russia Do Not Appear To Trust Each Other

The Russian Post reports that while Germany is helping Russia fortify Black Sea ports, the Russians are busy building a "Stalin line" between Germany and Soviet-occupied Poland.

There is a little doubt of Hitler's intention to move along east to the north shore of the Black sea, the paper said.

"While there is no direct confirmation . . . it is believed that Hitler has undertaken to partition the Black sea region and the Caucasus if it becomes necessary to withdraw all Russian troops for service in Finland this summer.

"Whether Germany could carry out this undertaking if the Allies force the pace and make her right is very doubtful. . . .

"It is also said that Hitler has offered to partition all of Russian Poland that the other side has declined.

"German engineers found in Moscow are trying to direct Stalin's eyes toward a barrier line in the south against Turkey and the Allies. So that while Germany is adding Russia to fortify the Black sea ports, the latter is directing her own efforts to a barrier line which will keep the Germans out of west Russia.

An Interesting Discovery

Syracuse Student Finds Out Something About President Roosevelt

Aldo Hitler refers to himself in every 53 words in a public address, while Benito Mussolini uses the name only 13 in 33 words. Paul Waxman, a student at Syracuse University, reported these findings in a survey as a part of her special studies.

President Roosevelt ranked third, she disclosed, with only "I" in every hundred words. Winston Churchill's average was one in 169; Premier Deladier's one in 234, and Prime Minister Chamberlain's one in 248.

THE REDCLIFF REVIEW, THURSDAY, DEC. 21st, 1939

Exploding Public Enigma
Number One

(The author of this article is the wife of a typical Canadian business man, with a business background herself, and with children approaching voting age. The thoughts which Mrs. Weaver expresses out of her fresh concern for Canada not only speaks the average Canadian mind at this time, but possess a shrewd insight into the critical situation that faces the Dominion.)

Have you ever heard anyone say, "I don't know HOW to vote." "What CAN one believe?" "If a candidate is elected, what can he do?"

Multiply my facility of outlook by that of one hundred thousand or several hundred thousand others, and what have you?

An intelligent electorate? A more than promised personal advantage? —community advantage, —I have.

Multiply my desire for some thing that will further my interests, and what have you? A national benefit!

Have you ever carelessly criticized a candidate of the "other" party? Have you ever been influenced by public denunciation, whispering suggestion, vitriolic abuse, innuendo or ridicule? I have.

Have you ever taken the trouble to sift idle rumours? Have you ever kicked the movable of suspicion apart before it assumed mountainous proportions? I have NOT. —Is the result an atmosphere of good will —free from prejudices?

Recognizing these things, what contribution am I able to make to effect a change in present conditions? What am I willing to do?

First, keep an open mind. Refrain from destructive criticism.

Appreciate the sacrifice of men who give their lives to public service.

Take time to think constructively and express to each candidate the policy that I should like to see adopted for Canada's national needs, an example of which is our need for release from sectional interests and fear of material change. Freedom from these should result in cumulative effectiveness of all forms of thought and service.

The late Lord Tweedsmuir expressed this thought positively

in his statement to the Canadian Institute of International Affairs in Montreal, October 12, 1937, when he said (in part), "If the Commonwealth, in a crisis, is to speak with one voice, it will only be because the component parts have thought out for themselves their own special problems, and made their contribution to the discussion so that a true common factor of policy can be reached."

I am prepared to do this. Are you?

Apathy can only be routed by a determination to know facts, face facts, use facts; by assuming the responsibility of citizenship.

Multiply one responsible citizen by one hundred thousand, or several hundred thousand, and what have you?

An electorate grounded by thought?

NO!—A Vital Nation—A True Democracy.

UNDAUNTED U BOAT VICTIMS

SURVIVORS of the crew of the Canadian Pacific cargo liner *Donau* rescued a warm-hearted welcome on landing at a British port. They expressed their happiness on reaching dry land again by singing "Auld Lang Syne." A group of shore members of the crew, cherry in

spite of their ordeal, preparing to do justice to a hot meal and fun. Part of the crew, standing along the wharf after landing, are shown in upper right. Note the sailor who only laid down to die his trousers. He is wearing a

more fortunate comrade's vest. Captain J. J. Jones, commander of the *Donau*, was heartily congratulated on his handling of a most serious situation. Center shows a port authority official adding his word of praise. The *Donau* was torpedoed early in February.

Keep Canada's War Effort United!

Experienced Leaders are

VITAL for VICTORY

In six months of war the Mackenzie King Administration has set an unprecedented record of getting things done without fuss and fury. Under its steady leadership, Canada has gone ahead on all fronts—war, economic and domestic. With clear heads and with feet on the ground, this group of purposeful men is making every ounce of Canada's weight felt in our fight for freedom. What it has done has been done thoroughly; there has been no loose thinking; no half-measures; no waste of men, money or materials.

Some of the Mackenzie King Administration Wartime

Accomplishments

It united Canada as never before—Every province is heart and soul behind the Empire's war effort this time, thanks to the Administration's truly national policies.

The First Division, completely equipped, has been sent overseas to a Mother country prepared to receive it.

The Second Division is recruited, equipped and ready to go over.

The great Empire Air Training Scheme—sponsored and mainly financed by Canada, has been launched on a planned and ordered basis.

Naval Co-operation for both East and West Coast, including Air Force, Mine Sweepers and Convoying, has functioned efficiently since the outbreak of War. Of it, a Senior British Naval Authority has said: "No finer work is being done anywhere by the Royal Navy itself."

Price Control of all commodities, including such vital necessities as wool and sugar, has been established, with prices pegged here for the poor man. The profiteer is out, and will be left out—in marked contrast to the free-for-all of the last war.

Shipping Control and Foreign Exchange Control are firmly established on sound lines, and are functioning smoothly and effectively.

A \$200,000,000 War Loan was over-subscribed within two days of its launching, a record that proves public confidence. Its reasonable rate of 3½% contrasts with 5½% for the rate of the last war.

Political and Private Patronage has been stamped out; merit is the sole basis for selection or promotion in our armed forces.

Great Britain's war financing problems have been lessened through the co-operation of the Canadian Government.

War Contracts totalling well over \$100,000,000 have been placed, stimulating every branch of Canadian industry.

Canadian employment has hit an all-time high owing to these orders and to good internal business conditions.

Armament deliveries and approaching full-speed: airplanes, Bren guns, tanks, artillery reconnoisseurs, ships—all coming forward in impressive quantities.

Large purchases of Canadian wheat, —preventing a serious wheat glut—have been arranged through a special mission sent to London by the Mackenzie King Administration.

5,600,000 pounds of bacon will be shipped to Great Britain each week, as well as large quantities of flour and fish.

Huge shipments of steel and other materials essential to the conduct of the war have been arranged for.

Make Your Vote Support Canadian Unity

Such a record simply didn't just happen. It resulted from the efforts of a strong administration working on behalf of a country united in effort from the very beginning. And this singleness of purpose—emphatically absent in 1914—due to the vision, understanding and drive of individual Canadian and Empire-minded Statesmen who back the Empire's participation in the war with their eyes wide open and with full determination to play their parts to the full.

We appeal to the people of Canada for the support which is essential to our on and complete a task, the groundwork for which has been laid carefully, soundly, wisely... with forethought, determination and courage.

On March 26th show your faith; vote for the Candidate supporting Mackenzie King and help make sure there can be no break in Canada's steadfast stand in these critical times.

Freedom Of Nationality

Is Still Being Sought In British War-Married Women

British women are waging a renewed battle to get freedom of nationality established for married women.

A deputation of some 100 British women of war-time soldiers attended at the House of Commons recently to set their case before war-time members, explaining that several hundred more would have joined them had it not been for wartime restrictions placed upon them which forbade them to move more than five miles from their homes.

In the question of nationality has, therefore, a very special significance. On the one hand, the woman pointed out, women of alien enemy origin are free to marry British subjects and from thenceforth to become British themselves—going where they please, hearing what they please in a country with which their own country is at war.

On the other hand, British-born women who have married enemy aliens are subject to every restriction imposed upon their husbands.

Moreover, should an alien husband lose his nationality, his British-born wife is unable to regain her original status as a British subject unless she succeeds in getting a divorce, or is willing to wait for five years while her husband is away, after which she can get a certificate of British nationality, or is left a widow.

In Great Britain the law as it affects nationality is ancient, and slight modification, remained unchanged since the passage of the Naturalization Act of 1870, by which for the first time in history, a British woman was made to lose her national status on marriage with an alien.

On 12 separate occasions since 1922, the question of nationality has been before Parliament—five Bills have been introduced. A resolution has been adopted unanimously in the Commons. The Prime Minister has made a statement favorable to change, a Joint Select Committee of the Lords and Commons has been appointed.

In July, 1938, Lord Alton introduced a Bill which first would have restored the free nationality rights that women possessed before 1870. Secondly, it would have permitted women to regain the nationality that had been lost by them, and, thirdly, it would have made it possible for women of alien birth automatically to acquire British nationality by reason of marriage with a British subject.

In June, 1939, 26 women's organizations launched a joint campaign in support of Lord Alton's Bill.

New Standard Of Fitness

High Morale And Perfect Health Essential For Airman

The making of Canada the training centre for the airplane service of the Empire may be assured upon the general fitness of Canadian youth. No physical weakness may hope for a place in the airplane service. None may count to any considerable degree, but the decidedly undemanding work of the aviator is essential in a vociferous to exacting. Along with these will go that stamina apart from which there is no dependability. Anyone lacking any of these characteristics may as well save himself the trouble of applying for the air force.

Has Been Discharged Twice

Welshman 75 Years Old Determined To Stay In Army

Discharged from the army twice since the war started because he is 78, age was revealed, Henry Ross, 78, of Cardiff, Wales, means to enlist again, he told a reporter.

"I am 78," the veteran said when he marched into a recruiting office just after the war began.

He was put into a home defence unit and might still be there if a non-commissioned officer had not discovered that he had a 40-year-old son.

Undaunted, and still 78, he rejoined the army at another recruiting office and was employed as a waiter at a Welsh depot. This time the officers learned he was doing a clerical pension.

A steady rain that descends on New York City early in the afternoon and continues, increases the taxicab trade by an average of \$35,000 worth of extra business.

As well as discovering the New World, Christopher Columbus discovered the pineapple. In 1493 he landed at Guadeloupe in the West Indies and found the fruit.

Canadian Novel

History Written By Lord Tweedsmuir To Be Published Soon

Lord Tweedsmuir completed writing a novel dealing with Canada about two weeks before his fatal illness. It was learned from the governor-general's personal secretary, Mrs. L. A. Killick.

The novel will be published late this year or early in 1941. Its character is the fictional Sir Edward Lother, a gentleman somewhat bettered with existence but who finds amazing adventures and expressed philosophies on contemporary life.

In Lord Tweedsmuir's Canadian novel, Sir Edward visits the Dominion and journeys to the Arctic in an aeroplane flight over the northern barrens which the governor-general himself crossed in 1937.

Canadian soon will have an opportunity to read for themselves about some of the things and people that most impressed Lord Tweedsmuir, when his memoirs, completed at Christmas, are published. Soon after he came to Canada in 1935 the governor-general began putting down in paper the impressions stored up in his mind.

Mrs. L. A. Killick, personal secretary to the governor-general, said that these writings concern little about Lord Tweedsmuir's life in Canada.

The recollections, written during his term as governor-general, will appear in print this spring under the title, "Pillgrims' Way: An Essay in Recollection." The volume, running from 80,000 to 100,000 words, is still in the hands of Mrs. Killick. It will not be ready for the publishers for another month or so.

Health Value Of Porridge

British Expert On Diet Says Out-pace Better Than Beans And Eggs

Sir John Boyd Orr, famous expert on diet, writes as health food to replace butter and bacon, porridge—oatmeal porridge.

"This is what he said about it: 'Among our home-produced foods whose health value is not appreciated because they are so cheap is oatmeal.'"

"There is a vitamin called B1 which is believed to be of special value in keeping the digestive tract and nervous system healthy. Some food products are advertised and sold at a high price because they are rich in B1."

"Well, there is more of this vitamin in oatmeal than in almost any other common food. In addition, oatmeal contains more vitamin A than white bread, three times as much, and six times as much fat."

"Porridge and milk are better for you than bread and eggs. They are far cheaper and have the further advantage that, both of them are 100 per cent. home produced, whereas bacon and eggs are largely imported."

Venture Forth

Band Of Adventurers Seek Security On Uninhabited Island

A little band of 12 adventurers headed out on the high seas recently, bound for an uninhabited island in the West Indies to establish "security for ourselves and for our children."

Carrying them was the yacht Splendid, owned by a Chicago syndicate that will help the colonists exploit East Coast island, which lies about 600 miles southeast of Florida.

Uninhabited since 1922, the 100,000-acre island is reported to possess wild cattle, sheep and other stock left behind when a British corporation discontinued operations there.

Only the barest necessities were taken along by the colonists.

Lucky Canadian Soldier

Queen Elizabeth Told With Ontario Man In Hospital

The thrill of having the Queen stop at his bedside when he noticed his Canadian badge during a visit to hospital was almost too much for the ill, Bertram McLean of Picton, Ont. Writing to his father, Judge E. H. McLean, Q.M.S. McLean states that he had been in a London hospital with "flu" for three weeks.

"The Queen," he wrote, "wanted to know I came from, and when I told her we lived near Kingston, she asked me if our regiment was there last year when she was there, and I told her that everybody in Picton was there, and she laughed. I was nearly overcome by the experience and I got a big thrill out of it."

Blood transfusion is being tested in South Africa as a cure for leprosy.

"Annie Laurie" is the favorite song of British soldiers.

BRITISH AIR FORCE HAS ALL GERMAN AREAS PHOTOGRAPHED

Royal Air Force planes went over to Wilhelmshaven, the German Naval Base, and took this photograph while the battleships, up and left, and other anti-aircraft batteries, did their best to bring down the British planes. This photograph is keyed: (A) marks existing harbour, (B) a capital ship, (C) the new mole, (D) entrance to new harbour, (E) new locks under construction, (F) coffer dam, (H) dredger sucking silt and pumping to reclaimed area, etc.

Storing Ice

Farmers Should Put Up Store Of Ice For Summer Use

It is nearing the season of the year when the annual ice harvest will commence, and a few farmers may be timely at the present time. There are many farmers who annually put up a supply of ice for the home and dairy. There are, however, many more farmers who do not do so, and it is particularly to these that the following will apply, states R. G. Newton, Superintendent, Dominion Experimental Station, Winnipeg, M.C.

No pretentious or costly building or equipment is needed for storing ice. A small out building of rough lumber or logs, or a lean-to against some present building in all that is needed. The main consideration in storing ice is to have good drainage below the ice, plenty of insulation material around and over the ice and with good ventilation in the building above the ice. This insulation material may be fine shavings, sawdust, finely cut straw or chaff.

The ice should be cut a uniform size to as to pack nicely and not too large, around 180 to 200 pounds being a handy size. The blocks should be packed as tightly as possible, and the joints well tamped with finely crushed ice or snow. From 12-16 blocks of insulation around and over the ice will be found sufficient, and where insulation is easy to obtain more may be used to advantage.

Legal Weights

In contracts for the sale and delivery of any of the undermentioned articles in Canada, the legal weights per bushel are as follows: 70 lb. bluebonnet coal and lime; 60 lb. alfalfa seed, beans, clover seed, peas, potatoes, soybeans, vetch and wheat; 56 lb. flax seed, Indian corn and rye; 50 lb. millet (proso); 48 lb. barley, buckwheat, malt (cereal); 40 lb. timothy hay; 40 lb. hemp; 40 lb. carter beans; 35 lb. malt; 34 lb. oats; 22 lb. crushed wheat grass seed; fescue seed; 20 lb. rye grass seed; 18 lb. blue grass seed; 14 lb. broom grass seed, orchard grass seed and slender wheat grass seed (western rye grass).

Father: "The man who marries my daughter will get a prize."

Bride: "May I see it, please?"

Two Types Of Lightning

One Explains And The Other A Slow Burning Stroke

Discovery that there are two distinct types of lightning, one the explosive, smashing stroke familiar to everyone, and the other a hitherto unrecognized slow and burning stroke, was announced in the magazine Electrical World.

One kind knows a tree apart, the other sets it afire. The slow lightning was discovered by Dr. K. R. McCathron, Rensselaer, N.Y., who has spent many years studying lightning.

The slow stroke has a low amperage electrical current. This current flows through the air steadily for a comparatively long time, perhaps a second to a second and a half. The current may range from a dozen amperes to a few hundred.

The explosive stroke makes a huge roar, sometimes 5,000 amperes, and shoots it quickly.

King George Plays Hockey

Made Up In Enthusiasm What He Lacked In Skill

By permission of the censor, the royal household has been told that the King has played his first game of "ice hockey."

It happened in January on a frozen strip of water near the royal residence at Sandringham, but because of the censor's ban on mention of England's frigid weather it can't be revealed then.

The News-Chronicle reports that the King was one of the keenest players among those taking part. What His Majesty lacked in skill he made up in enthusiasm.

The game was somewhat unorthodox, as many as 20 on each side played at times. The King himself has a regulation stick but some of his team and opponents used field hockey sticks and walking canes.

In 1937, Chicago, the Windy City, had two days with 35-mile-per-hour winds; Buffalo has 165; New York City 80, and Cleveland 81 such days.

The moon travels over our heads at a rate of approximately 2,300 miles an hour.

Families selected in Italy to settle in Ethiopia are assigned their future homes before they sail.

AS NEW ORLEANS OBSERVED MARDI GRAS FETE

Canal Street, New Orleans' most famous thoroughfare, is packed with humanity as the hosts of the Rex carnival parade past during the 1940 Mardi Gras' celebrations.

Forage Crops

The Choice Of Forage Crop Need For Spring Is Important

It is important, that as spring approaches, thought be given to the seedling program so that plans will be well in hand by seeding time. This is particularly true with regard to the forage crops. Many factors will govern the varieties and species chosen but one main consideration should be in mind and that is "quality." The best forage crops made available should be used in order that the risk of poor stands and consequently poor crops may be reduced to the minimum. The following rules should be kept in mind when buying forage crop seed or requirements, states R. M. MacVicar, Division of Forage Plants, Central Experimental Farm, Ottawa.

1. Choose the species which your own experience or the experience of your neighbors has indicated are the best for your conditions. For example if you have found alfalfa best for hay and pasture, buy alfalfa seed and not seed of other species because it is a few cents cheaper.
2. Acquaint yourself with the established varieties of forage crops you grow. For example there may be a variety of meadows much better for hay than alfalfa. When buying forage crops you have been growing. Information on new and old varieties of forage crops is readily obtainable.
3. Buy registered seed or if it is not available ask for certified seed. It is easy to get misled as to the purity of the variety.
4. Do not buy seed that is not new. Seed that is old will not give purity and freedom from weed seeds. The purchase of low grade seed is obviously false economy.
5. When making your approved Canadian grown seed in preference to imported seed.

Is Still A Jumper

Courage Of Blind Horse Is Told By "Understanding" Mistress

With an understanding mistress and an equine determination, Elmer Gantry, blind jumping horse, still carries on after going blind five years ago, according to his owner, Miss Edna G. Gantry, of Barrington, Ill. Despite his blindness, Gantry still gallops with other horses over the open prairie, leaps four-foot hurdles at shows and plays in motion pictures.

"It was Gantry's own determination to go on living," Miss Gentry told interviewers at Winipeg. "The only thing I take credit for is understanding that."

After he went blind, Gantry "re-fused" to believe his jumping days were over. "The horse's talent owner added, 'I could see him straining to get out with the other horses. Then I began to take him out with them. When he heard them take a jump, he started rearing and lunging and acting badly.'"

"I went to go with his jumping and after that, it was just a practical routine."

Miss Gentry said the night before last he leapt the height of the jump before taking them and so perfectly does he leap it is hard to believe he cannot see. His blindness is evident, however, when the hurdle is taken away and Gantry jumps over a barrier that is not there.

She employs a special code of four commands in taking Gantry over the obstacles. "All right," which means he can go into a full gallop; "Come on," when he is approaching a jump; "Ready," for him to get set for the leap; and "Hup" for over.

Imperial Measure

United States Standards Are Not As Large As Used In Canada

Certain standards of weights and measures used in some of the states of the United States are not legal in Canada, though frequently used. The U.S. standards are so much larger than the Canadian ones that they are being about 10.5 per cent. smaller in capacity than the legal standards in Canada, that is, the Imperial pint, quart and gallon. Imperial measure is 20 per cent. larger than the U.S. measures.

To convert a given number of U.S. gallons into Imperial gallons, subtract 10th or divide by 1.2. To convert a given number of Imperial gallons into U.S. gallons, add 13th, or multiply by 1.2.

Hampton Court palace, England, the magnificent residence which Cardinal Wolsey built and later presented to King Henry VIII, has nearly 1,000 rooms.

The honor of being the world's only woman circus clown is claimed by Miss Lulu Crean, of London, England.

Interesting Local Items

Mrs. O. Vogstad is among
those who are ill with 'flu at
present, friends will regret to
hear.

Friends of Mrs. Harry John-
son will be glad to know she is
able to be about again after her
recent fall.

Pte. Orland Marty of the Cal-
gary Highlanders was a visitor
in town at the weekend, with his
parents, Mr. and Mrs. J. Marty.

Pte. Gordon Newnam of the
Calgary Highlanders spent a few
days in town last week with his
parents, Mr. and Mrs. C. Newnam.

Mr. and Mrs. W. C. Yuill, of
Medicine Hat, were among the
visitors at the local (School Ex-
hibition on Friday evening.

Friends of Mrs. A. Baumbach
(nee Margaret Stratton) will be
sorry to learn that she under-
went a serious operation at the
Medicine Hat Hospital on Thurs-
day.

Pte. Arthur Harris returned
on Sunday to Calgary to rejoin
his regiment, the Calgary High-
landers, after spending a few
days here with his mother and
sister.

Friends of Mrs. W. Pickering
sprang a pleasant surprise upon
her last Wednesday when they
'dropped in' to help her cele-
brate her birthday. The even-
ing was spent at cards, after
which dainty refreshments were
served and a pleasant social hour
was enjoyed.

Miss Daisy Harris won the two
rugs and the quilt in the draw at
the School Exhibition on Friday.
Other winners of two rugs were
Mr. Harry Turner, Mrs. G. Huak-
le, Mrs. Ted Johnson, Mr. Wm.
Champ and Miss E. Kaldestad.
The Doll House was won by Mrs.
F. Bodnar.

Mrs. R. Moore has as her guest
at present, her sister, Miss Norah
Hosier of Brexetlawn.

Protect Your Horses

Equine Encephalomyelitis

(Sleeping Sickness)

An outbreak of the disease may occur in Alberta
this season.

VACCINATION

with Chick Vaccine is the only preventative.

PROCEDURE:

1. Vaccinate before seeding.
2. Two doses are required, given seven to fourteen
days apart.
3. The Vaccine is available at Drug Stores, or may
be obtained from Veterinarians, and some Munici-
pal Districts may handle it.
4. If a qualified Veterinarian is not available, the
Vaccine should be administered by some other
person trained by a Veterinarian. Farmers wish-
ing to do so may obtain a syringe and learn how
to vaccinate their own horses.

Vaccine is effective only when administered prior
to the outbreak of the disease.

Vaccinate Early!

The Department of Agriculture recommends
vaccination as an insurance against loss.

HON. D. B. MULLEN,

Minister of Agriculture.

Reap Bigger, Better CROPS

REGISTERED SEED

GOOD seed is the first requirement for bigger, better
yields. That is why it pays to use Registered Seed.
Registered Seed is pure as to variety and ensures crops of greater
yield, higher quality and better grade. Registered Seed is sold only
in sealed containers, government-logged, and government-inspected.
It requires no cleaning.
It pays to use Registered Seed!
For information regarding sources of supply of approved varieties
write to - the District Supervisor, Plant Products Division of the
Dominion Department of Agriculture for your district, the nearest
Dominion Experimental Farm, the Provincial Department of
Agriculture, or the nearest Agricultural College.

Food supplies are important in wartime -
This year, plant and raise only the best!
